

STUDIES ON THE FAUNA OF CURAÇAO, ARUBA,
BONAIRE AND THE VENEZUELAN ISLANDS: No. 9.

SCORPIONS

by

Dr. P. WAGENAAR HUMMELINCK (Utrecht)

This survey of the scorpions of the Leeward Group is based on author's collection and therefore includes some mainland-records from northern Venezuela and northeastern Colombia. Material from Curaçao, deposited in the "Zoölogisch Museum, Amsterdam" (A) and the "Rijksmuseum van Natuurlijke Historie, Leiden" (L) has been included, and the few island-records which were found in literature mentioned. Important new localities are indicated by an exclamation-mark.

A description of the localities may be found in the 1st and the 4th paper of this series.

The newly collected material has been presented to the Zoological Museum of Amsterdam, the Netherland State Museum, Leiden, and the Zoological Museum of the State-University in Utrecht.

Rhopalurus Thorell (1877), Meise (1933) emend.

= *Centruroides* Pocock (1902) + *Rhopalurus* Thorell (1877) + *Heteroctenus* Pocock (1893). [*Centurus* Hemprich et Ehrenberg (1828) *nomen nudum*; nec *Centurus* C. Koch (1838)]

Rhopalurus gracilis (Latreille, 1804) Meise, 1933

Kraepelin, 1891, p. 170, 273 (sub *Centrurus*); Kraepelin, 1899, p. 92 (sub *Centrurus*); Pocock, 1902 (Biol.), p. 32, tab. 7 fig. 3—4 (sub *Centruroides*); Hoffmann, 1932, p. 294, fig. 73—76 (sub *Centruroides*); Meise, 1933, p. 30. — [?] *Buthus europeus*, Sánchez, 1921, p. 67 (Margarita).

LA GUAIRA, 19.VIII.1936 (3 specimens). CARACAS, Blandin, 1935 (2 sp.; don.). MARGARITA, Porlamar, St. 155 (10 sp.); Porlamar, 3.VI.1936, in houses (4 sp.); Porlamar, 27.VI.1936, in house (2 sp.); Porlamar, 5.VII.1936 (2 sp.); Porlamar, 17.VII.1936; Porlamar, 13.VIII.1936.

Escorpión, escorpión, alacrán (collective noun for scorpion in Spanish).

25 Specimens, adults, 9 males, 16 females. Longest male, from Margarita, 104 mm (cauda 71 mm); longest female 98 mm (cauda 59 mm). Average length and width of 5th caudal segment in adult males $14(-15)$ and $3\frac{1}{2}(-4)$ mm, in adult females $12(-12\frac{1}{4})$ and $4(-4\frac{1}{2})$ mm. Pectines with $(28-29-30,2-31(-34)$ teeth.

Widely spread from Texas to Brasil, Antilles; Margarita, obviously introduced.

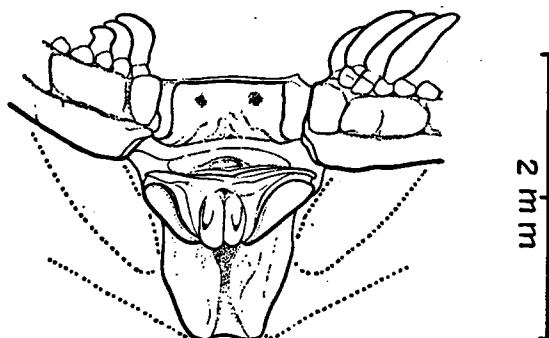

Fig. 16. Male *Rhopalurus hasethi* from Aruba, St. 250, 53 mm in length (cauda 33 mm); showing base of pectines, genitals and sternum of cephalothorax.
[pres. alcohol]

Rhopalurus laticauda Thorell, 1876

Thorell, 1876, p. 9; Kraepelin, 1891, p. 279 (sub *Centrurus*); Kraepelin, 1899, p. 95 (sub *Centrurus*); Kraepelin, 1911, p. 73 (sub *Centruroides*); Lutz, 1928, p. 72, figs., non viso; Meise, 1933, p. 32 (sub *testaceus latic.*).

GOAJIRA, El Cardón, St. 291; El Cardón, 27.I.1937; Uribia, St. 288 (observed); Tucacas, St. 286 (obs.). PARAGUANA, Carirubana, St. 279 (2 specimens); Cerro Transverso, St. 280 (3 sp.); Moruy, St. 283. CARÚ-PANO, Esmerarda, St. 124; Puerto Santo, St. 125 (4 ad., 18 juv.); Puerto Santo, St. 126. ARAYA, Chacopata, St. 127 (obs.); Isla de Caribes, St. 128 (2 sp.). COCHE, St. 129 (2 sp.). CUBAGUA, St. 130. MARGARITA, La Asunción, St. 148 (6 sp.); Punta Mosquito, St. 152; Porlamar, 26.V. 1936; Porlamar, 2.VI.1936 (5 sp.). TESTIGOS, Morro de la Iguana, St. 157; Chiwo, St. 159 (2 sp.); Angoletta, St. 160 (2 sp.); Tamarindo, St. 162 (2 sp.); Tamarindo, St. 163; Isla de Conejo, St. 165. FRAILES, Puerto Real, St. 166; La Pechá, St. 168 (2 sp.). HERMANOS, Morro Pando, St. 170. TORTUGA, St. 173.

Alacrán, escorpión; yaúru (Goaj.).

64 Specimens, 21 adults. Table 20. Average length and width of 5th caudal segment in adult males $5(-5\frac{1}{2})$ and $4(-4\frac{1}{4})$ mm, in adult females $6(-7)$ and $4(-4\frac{1}{4})$ mm. Pectines with $(20-)21-23,4-24(-25)$ teeth.

Colombia, Venezuela, Guayana, Brasil, Trinidad; Margarita!, Coche!, Cubagual, Los Testigos!, Los Frailes!, Los Hermanos!, Tortuga!.

Ananteris cussinii Borelli, 1910

Borelli, 1910, p. 1.

GOAJIRA, Rio Hacha, St. 293.

1 Specimen, young female, 16 mm in length (cauda 10 mm). Pectines practically without fulcra; 3 dorsal-lamellae, 7-8 intermediate-lamellae; 18 teeth. 5th Caudal segment with 5 distinct keels. Palpi granulated above; hand light-yellowish, finger with a broad brownish or blackish zone above the base. — Possibly not specifically separable from *A. balzani* Thor.

Venezuela; northeastern Colombia. [*A. balzani*: Paraguay, Paraná]

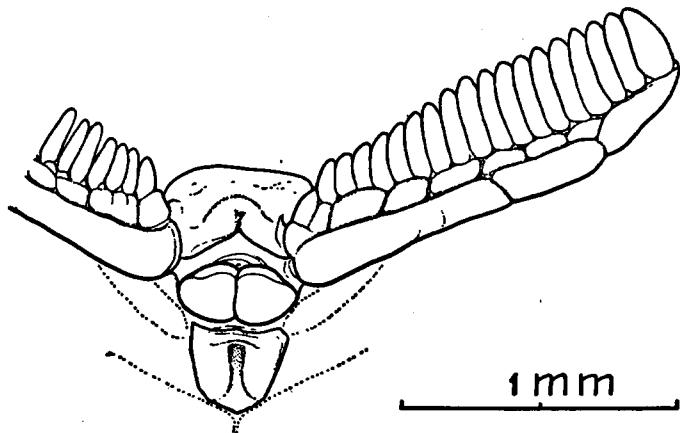

Fig. 19. Rather young female *Ananteris cussinii* from Rio Hacha, Colombia, St. 293, 16 mm in length (cauda 10 mm); showing right pectine, genital operculae and sternum of cephalothorax.
[pres. alcohol]

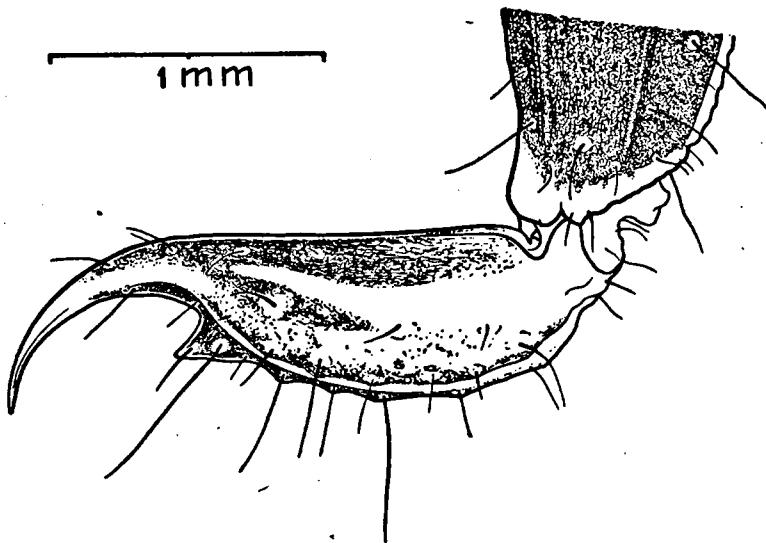

Fig. 20. Rather young female *Ananteris cussinii* from Rio Hacha, Colombia, same specimen; showing extremity of tail from the right, variegated with very dark brown.
