

Contents

Preface	ix
1. Introduction	1
1.1 The problem of scale transfer	1
1.2 Aims and scope	6
1.3 Definitions	7
1.4 Contents of this book	16
2. Upscaling	19
2.1 A classification of upscaling methods	19
2.2 Averaging of observations or output variables	28
2.2.1 Exhaustive Information	32
2.2.2 Design based methods	34
2.2.3 Geostatistical prediction	38
2.2.4 Deterministic functions	42
2.2.5 Combinations and auxiliary information	45
2.3 Finding representative parameters or input variables	50
2.3.1 Exhaustive information	60
2.3.2 Deterministic functions	64
2.3.3 Indirect stochastic methods	67
2.3.4 Direct stochastic methods	72

2.3.5 Inverse modelling	78
2.4 Averaging of model equations	82
2.4.1 Deterministic: temporal or volume averaging	87
2.4.2 Stochastic: ensemble averaging	91
2.5 Model simplification	95
2.5.1 Lumped conceptual modelling	101
2.5.2 Meta-modelling	105
3. Downscaling	111
3.1 A classification of downscaling methods	111
3.2 Empirical functions	119
3.2.1 Deterministic functions	120
3.2.2 Conditional stochastic functions	122
3.2.3 Unconditional stochastic functions	126
3.3 Mechanistic models	131
3.3.1 Deterministic functions	131
3.3.2 Conditional stochastic functions	133
3.3.3 Unconditional stochastic functions	136
3.4 Fine scale auxiliary information	138
3.4.1 Deterministic functions	138
3.4.2 Conditional stochastic functions	141
3.4.3 Unconditional stochastic functions	142
4. A simple DSS for upscaling and downscaling	145
4.1 Purpose and philosophy of the DSS	145
4.2 Functionality and options at startup	146
4.3 Definition of the research chain over the scales	149
4.3.1 Define a new research chain	149
4.3.2 Modify parts of research chain	152
4.4 Enter the DSS from the research chain	154
4.5 DSS Upscaling and Downscaling	155
Appendix: Random Variables and Stochastic Functions	157
Glossary	177
