CONTENTS

CHAPTER 1	ROLE OF PROBABILITY METHODS IN POWER SYSTEM ENGINEERING	1
1.1	Introduction	1
1.1.1	Historical Perspective / 4	
1.2	Examples of Power System Design and Analysis Problems Involving Consideration of Uncertainty	6
1.2.1	Generation-Reserve Reliability Evaluation / 6	
1.2.2	Strength Versus Stress Calculations: Electrical Design of Substations / 7	
1.2.3	Strength Versus Stress Calculations: Structural Design of Transmission Towers / 8	
1.2.4	Power System Studies: Probabilistic Load-Flow Computations / 9	
1.2.5	Power System Studies: Transient Analysis / 9	
1.2.6	Quality Control and Acceptance Sampling / 10	
1.3	Techniques for Probabilistic Power System Analysis and Design	10
1.3.1	Stochastic Processes / 11	
1.3.2	Decision Analysis / 11	
1.3.3	Reliability and Maintenance Problems / 12	
1.3.4	Monte Carlo Simulation / 12	

1.4 Concluding Remarks	13
References	14
 CHAPTER 2 CONCEPTS AND THEOREMS OF PROBABILITY	 15
2.1 Concepts of Events and Probability	15
2.2 Sample Spaces and Events	19
2.2.1 Classification of Sample Spaces /	19
2.2.2 Combination of Events /	20
2.3 Basic Axioms of Probability	24
2.4 Conditional Probability	27
2.5 Additional Theorems of Probability	30
2.5.1 Theorem on Total Probability /	31
2.5.2 Bayes' Theorem /	35
2.6 Concluding Remarks	38
Problems	39
References	42
 CHAPTER 3 RANDOM VARIABLES	 43
3.1 Cumulative Distribution Function	44
3.2 Characteristic Measures of a Random Variable	49
3.3 Theoretical Probability Distributions	51
3.3.1 Discrete Distributions /	57
<i>The Binomial Distribution /</i>	<i>58</i>
<i>The Geometric Distribution /</i>	<i>59</i>
<i>The Pascal Distribution /</i>	<i>60</i>
<i>The Hypergeometric Distribution /</i>	<i>61</i>
<i>The Poisson Process and Poisson Distribution /</i>	<i>62</i>
3.3.2 Continuous Probability Distributions /	64
<i>The Normal Distribution /</i>	<i>65</i>

The Logarithmic Normal Distribution / 67
The Gamma Distribution / 69
The Weibull Distribution / 72

3.4 Multiple Random Variables	75
3.4.1 Joint and Marginal Probability Distribution Functions / 75	
3.4.2 Covariance, Correlation, and Independence / 81	
3.5 Estimation of Parameters and Determination of Distribution Models	85
3.5.1 Introduction / 85	
3.5.2 Estimation of Parameters / 86	
<i>The Method of Moments</i> / 86	
<i>The Maximum Likelihood Method</i> / 89	
3.5.3 Generation of Probability Distributions / 92	
<i>Numerically Defined Distributions</i> / 93	
<i>Fitting Probability Distributions Using Probability Papers</i> / 94	
<i>Subjective Distributions</i> / 99	
3.5.4 Goodness-of-Fit Tests / 102	
<i>The Kolmogorov–Smirnov Test</i> / 102	
<i>The Chi-Square Test</i> / 103	
3.6 Concluding Remarks	105
Problems	106
References	109
 CHAPTER 4, FUNCTIONS OF RANDOM VARIABLES	 111
4.1 The Probability Distribution of a Function of a Random Variable	111
4.2 Function of a Bivariate Random Variable	122
4.3 Approximations of Distributions and Their Moments	126
4.3.1 Approximations of the Binomial and Poisson Distributions / 126	

4.3.2	Approximations of the Mean and Variance of a General Function / 128	
4.4	Generalization to Functions of Several Random Variables	130
4.4.1	Single Function of Several Variables / 130	
4.4.2	Vector Functions / 133	
4.5	Extreme Value Distributions	139
4.5.1	Introduction / 139	
4.5.2	Type I Asymptotic Extreme Value Distribution / 141	
4.5.3	Other Asymptotic Extreme Value Distributions / 147	
4.6	Concluding Remarks	150
	Problems	152
	References	154
CHAPTER 5	STOCHASTIC PROCESSES	157
5.1	Basic Concepts	157
5.2	Markov Processes	160
5.2.1	Discrete-Parameter Markov Chain / 160	
	<i>State Probabilities</i> / 161	
	<i>First Passage Times and Mean Recurrence Times</i> / 166	
5.2.2	Continuous-Parameter Markov Chain / 175	
	<i>First Passage Times</i> / 181	
5.3	Poisson Process	184
5.4	Renewal Processes	190
5.4.1	Probabilities Associated with Renewal Processes / 191	
	<i>Time to the rth Renewal</i> / 192	
	<i>The Renewal Function and the Renewal Density</i> / 194	
	<i>The Probability Distribution of $Y(t)$ (the Age at t) and $Z(t)$ (the Residual Life at t)</i> / 197	
5.4.2	The Alternating Renewal Process / 200	

5.5 Concluding Remarks	204
Problems	204
References	207
 CHAPTER 6 DECISION ANALYSIS	 209
6.1 Introduction	209
6.2 Examples of Power System Decision Analysis Problems	210
6.3 The Nature of the Decision Process	212
6.4 Techniques for Decision and Risk Analysis	215
6.4.1 Decision Matrix / 215	
6.4.2 Decision Tree / 217	
6.4.3 Decision Criteria / 221	
6.4.4 Decision with Additional Information / 235	
6.4.5 The Cost of Uncertainty / 241	
6.5 Value and Utility	243
6.5.1 Utility Functions / 245	
<i>Exponential Utility Function</i> / 246	
<i>Logarithmic Type</i> / 247	
<i>Quadratic Type</i> / 248	
6.5.2 The Maximum Expected Utility Criterion / 250	
6.6 Decisions with Multiple Objectives	251
6.7 Concluding Remarks	263
Problems	264
References	267
 CHAPTER 7 RELIABILITY	 269
7.1 Power System Reliability Concepts	269
7.1.1 Deterministic and Probabilistic Reliability Criteria / 269	

7.1.2	Reliability Indices / 271	
7.1.3	Reliability-Related Subsystems / 272	
7.1.4	The Scope of This Chapter / 278	
7.2	The Concept of Performance Function	280
7.3	Reliability Evaluation Methods	285
7.3.1	State-Space Method / 286	
	<i>The Concept of Availability / 287</i>	
	<i>The Concept of Frequency / 289</i>	
	<i>Multistate System Representation / 292</i>	
7.3.2	Logic Diagrams / 307	
	<i>Series Systems / 307</i>	
	<i>Parallel Systems / 308</i>	
	<i>Non-Series-Parallel Structures / 311</i>	
7.3.3	Minimal Tie and Minimal Cut Sets / 312	
	<i>Reliability Indices Computed from Minimal Cuts / 314</i>	
7.4	Uncertainty in Reliability Indices	321
7.5	Reliability Importance	324
7.5.1	Structural Importance / 325	
7.5.2	Criticality Importance (ICR) / 326	
7.5.3	Fussell-Vesely Importance (IFV) / 326	
7.6	Approximate System Reliability Evaluation	330
7.6.1	Probability Bounds / 330	
7.6.2	Approximations Using Cut Sets / 339	
7.6.3	The PNET Method / 340	
7.7	Concluding Remarks	343
	<i>Problems</i>	345
	References	349
CHAPTER 8	PROBABILISTIC STRUCTURAL DESIGN AND ANALYSIS OF TRANSMISSION SYSTEMS	353
8.1	Introduction	353

8.2 Design Philosophies	354
8.3 Analysis and Assessment of Transmission Line Reliability	358
8.3.1 Probability of Failure / 358	
8.3.2 Derivation of the Stress and Strength Distributions / 362	
<i>Transverse Wind Load on a Conductor</i> / 363	
<i>Ice Load on a Conductor</i> / 364	
<i>Wind-on-Ice Load on a Conductor</i> / 364	
8.4 Probability-Based Design Criteria	369
8.4.1 Failure Surface and Limit States / 370	
8.4.2 Limit-States Designs / 374	
8.4.3 Review of Currently Effective or Proposed RBD Procedures of Transmission Structures / 383	
<i>Load and Resistance Factors Combined with Mean Values</i> / 384	
<i>Use of Controlled Exclusion Limits and Return Periods</i> / 388	
<i>Combined Methods Involving Use of All Four Factors</i> / 389	
<i>Reliability Targets</i> / 391	
8.5 Directional Considerations for Extreme Wind Climatic Events in the Transmission Line Design	392
8.5.1 An Influence of Wind Direction on Extreme Wind Loads for Overhead Power Lines / 393	
8.5.2 Frequency of Right-of-Way Losses Caused by Tornadoes / 403	
<i>Description of the Model</i> / 403	
<i>Characteristics of Tornadoes</i> / 404	
<i>Expected Value and Variance of the Frequency of Right- of-Way Losses</i> / 406	
8.6 Concluding Remarks	410
Problems	411
References	412

CHAPTER 9 PREVENTIVE MAINTENANCE, INSPECTION, AND REPLACEMENT	415
9.1 Introduction	415
9.2 Age-Dependent Maintenance Policies: Deterministic Maintenance Duration	418
9.2.1 Optimal Preventive Replacement Interval: Minimization of Costs / 420	
9.2.2 Optimal Preventive Replacement Interval: Maximization of Availability / 422	
9.2.3 Optimal Inspection Interval for Standby Equipment / 423	
<i>Construction of the Model / 424</i>	
<i>Human Error Probability During an Inspection</i> <i>Procedure / 426</i>	
9.3 Constant Maintenance Interval	433
9.3.1 Block Replacement / 434	
9.3.2 Periodic Replacement with Minimal Repair at Failure / 437	
9.4 Maintenance Model with Equipment Deterioration and Random Failure Durations	438
9.5 Overhaul, Repair, and Replacement Decisions	446
Problems	450
References	452
CHAPTER 10 PROBABILISTIC LOAD-FLOW STUDIES	455
10.1 Introduction	455
10.2 Deterministic Load-Flow Equations	456
10.3 Characterization of the Probabilistic Load-Flow Problem	459
10.4 Probabilistic Load-Flow Algorithms	461
10.4.1 Linear Approximations / 462	
<i>d.c. Load Flow / 464</i>	
<i>Decoupled Load-Flow Equations / 466</i>	

10.4.2	Probabilistic Analysis / 468	
10.4.3	Probabilistic Description of Power Injections / 470	
	<i>Approximating the Dispatching Law / 471</i>	
10.4.4	Computation of the State Vector and Line Power Flows / 481	
10.4.5	Nonnormal Random Variables in the Linearized Load Flow / 493	
10.4.6	Probabilistic Load Flow in Bulk Power System Reliability Studies / 498	
10.5	Stochastic Load-Flow Algorithm	501
10.6	Concluding Remarks	503
	Problems	503
	References	505
 CHAPTER 11	 PROBABILISTIC SHORT-CIRCUIT ANALYSIS	 509
11.1	Introduction	509
11.2	Deterministic Short-Circuit Analysis	510
11.3	Probabilistic Short-Circuit Analysis	513
	11.3.1 Single-Generator Representation / 514	
	11.3.2 Multigenerator Systems / 525	
	11.3.3 Analytical Models Using Superposition / 526	
11.4	Concluding Remarks	528
	Problems	528
	References	530
 CHAPTER 12	 PROBABILISTIC POWER SYSTEM STABILITY	 533
12.1	Introduction	533
12.2	Synchronous Machine Power-Angle Relations	535
	12.2.1 Acceleration Equations / 536	

12.2.2	Synchronous Machine Electrical Equations /	536
12.2.3	Classical Model /	538
12.2.4	Transmission Network Representation /	538
12.2.5	Reference Frame for Network Equations /	539
12.3	Steady-State Stability	539
12.3.1	Linearization of System Equations /	540
12.3.2	Eigenvalues and Eigenvectors /	542
	<i>Response of the System in Terms of Eigenvalues and Eigenvectors /</i>	<i>542</i>
12.3.3	Probabilistic Steady-State Stability Analysis /	544
12.4	Transient Stability	551
12.4.1	Overview of the Approach /	551
12.4.2	Probabilistic Disturbance Model /	553
	<i>Joint Probability Mass Function of the Disturbance /</i>	<i>553</i>
	<i>Stochastic Model of Disturbance /</i>	<i>556</i>
12.4.3	The System Model /	557
12.4.4	Protection System Modeling /	558
12.4.5	Probability Distribution of Fault Clearing Time /	559
12.4.6	Evaluation of System Response and Probability of Stability /	564
	<i>Equal Area Criterion /</i>	<i>565</i>
	<i>Step-by-Step Method /</i>	<i>573</i>
	<i>Direct Methods of Transient-Stability Analysis /</i>	<i>575</i>
12.5	Concluding Remarks	577
	References	578
CHAPTER 13	MONTE CARLO SIMULATION	581
13.1	Basic Principles	581
13.2	Generation of Random Numbers	585
13.2.1	Uniformly Distributed Random Numbers /	586
13.2.2	Generation of Random Numbers from a Given Distribution /	588
13.2.3	Generation of Jointly Distributed Random Numbers /	594

13.3	Accuracy of Monte Carlo Simulation	595
13.3.1	General Evaluation / 595	
13.3.2	Variance Reduction Techniques / 598	
	<i>Antithetic Variates Method</i> / 598	
	<i>Control Variables Method</i> / 601	
13.4	Examples of Application of Monte Carlo Simulation to Power System Problems	604
13.4.1	Reliability Studies / 604	
13.4.2	Nondestructive Evaluation of Wood Transmission Structures / 610	
13.4.3	Underground Cable Ampacity Studies / 615	
13.4.4	Short-Circuit Analysis / 625	
13.4.5	Transient-Stability Studies / 633	
13.5	Concluding Remarks	643
	Problems	645
	References	648
CHAPTER 14	ELEMENTS OF ACCEPTANCE SAMPLING	653
14.1	Acceptance Sampling by Attributes	654
14.2	Acceptance Sampling by Variables	660
14.2.1	Known Standard Deviation of the Lot / 661	
14.2.2	Unknown Standard Deviation of the Lot / 663	
14.2.3	Fraction Nonconforming Criterion / 664	
14.3	Concluding Remarks	666
	Problems	666
	References	668
	APPENDIX	669
	INDEX	677
