Volume 19 February 1982 Number 41

TROPICAL CYCLONES

Their Evolution, Structure and Effects

RICHARD A. ANTHERS

Inv. Nr. B 19/83

American Meteorological Society

Table of Contents

ACKNOWLEDGMENTS

1. INTRODUCTION	i
2. STRUCTURE AND LIFE CYCLE OF TROPICAL CYCLONES	11
2.1 Hurricane Measurements and Analysis Techniques	11
2.2 A Set of Equations Describing the Hurricane System	13
2.3 Dynamic and Thermodynamic Structure of the Mature Stage	16
2.3.1 Overall View	16
2.3.2 Wind Distribution	21
2.3.3 Pressure and Temperature Distribution	27
2.3.4 Formation of Hurricane Eye	32
2.3.5 Moisture and Precipitation Distribution	36
2.3.6 Hurricane Rain Bands	37
2.4 Genesis of Tropical Cyclones	48
2.4.1 Physical Parameters Favorable for Cyclogenesis	48
2.4.2 A Conceptual Model of Tropical Cyclone Genesis	58
2.5 Decay of Tropical Cyclones	61
3. PHYSICAL PROCESSES IN TROPICAL CYCLONES	65
3.1 Boundary Layer Transfers of Heat, Moisture and Momentum	65
3.2 Cumulus Convective Processes	73
3.2.1 Effect of Cumulus Clouds on the Temperature of Their Environment	74
3.2.2 Effect of Cumulus Clouds on the Humidity of Their Environment	77
3.2.3 Effect of Cumulus Clouds on the Momentum of Their Environment	79
3.2.4 A Cumulus Parameterization Scheme	81
3.3 Radiative Heating and Cooling	84
4. SIMULATION OF TROPICAL CYCLONES BY NUMERICAL MODELS	91
4.1 General Aspects of Models	91
4.2 Axisymmetric Hurricane Models	92
4.2.1 Early Difficulties	92
4.2.2 Simulation of Hurricanes	96
4.2.3 Alternative Treatments of Convection	102
