CONTENTS

PREFACE xiii

PART I INTRODUCTION 1

CHAPTER 1 THE EARTH'S ENVIRONMENTAL PROBLEMS AND THE ROLE OF HUMAN BEHAVIOR 1

Chapter Prologue

Introduction

Box 1-1: *Human Activities and the Global Nitrogen Cycle*

Focus of This Book: The Behavioral Dimensions

Format and Organization of This Book

More on the Role of Individual Behavior

More on Global Environmental Problems

The Greenhouse Effect

Ozone Layer Depletion

Rapid Loss of Tropical Forests and Loss of Genetic Diversity

Destruction of Ecological Capital

Driving Forces That Underlie Environmental Problems

Box 1-2: *More on Momentum in Growth Processes*

Reasons for Guarded Optimism

PART II ENVIRONMENTAL PROBLEMS AS “TRAGEDIES OF THE COMMONS”— BEHAVIORAL SOLUTION STRATEGIES 21

CHAPTER 2 ENVIRONMENTAL PROBLEMS AS TRAGEDIES OF THE COMMONS 21

Chapter Prologue

Introduction

Intellectual Roots of the Tragedy-of-the-Commons Concept and Different

Solutions to Tragedy-of-the-Commons Situations

Four Solution Approaches

Government Laws, Regulations, and Incentives

Education

Small-Group/Community Management

Box 2-1: *How Tragedy Was Averted on the English*

Agricultural Commons

Moral, Religious, and/or Ethical Appeals

*Which of the Four Solution Approaches to Use? Champions of the
Different Approaches*

The Four Solution Approaches: Strategy for the Next Five Chapters

Chapter Epilogue

**CHAPTER 3 RELIGIOUS AND MORAL APPROACHES: CHANGING VALUES,
BELIEFS, AND WORLDVIEWS 33**

Chapter Prologue

Introduction

Do Values, Morals, Beliefs, and Religious Teachings and Practices Affect
How Individuals and Cultures Treat Their Environment?

Survey-Research in a Single Country (the United States)

Historical and Intercultural Evidence

Proenvironmental Religious/Moral Movements—Current Developments and
Possible Future Trends

Ecotheology

Thomas Berry's Work

The Deep Ecology Movement

Ecofeminism

Common Threads in Religious/Morally Based Environmental Movements

Shared Ecological Worldview

Shared Ecocentric Values

Plan for the Rest of the Chapter

Issue One: Are Environmental Values and Beliefs Changing?

Strong Public Support for Environmental Protection

Emerging Support for the Ecological Worldview

A Direct Search for Ecocentric Public Values

The Emergence of "Post-Materialist" Values

Issue Two: Will Changes in Values and Beliefs Persist?

Issue Three: How Do Values and Beliefs Influence People's Actions?

*A Closer Look at How Values (and Beliefs about the Consequences of
Environmental Problems) Influence Actions*

Factors That Can Limit the Effect of Value and Belief Changes

Conclusion

**CHAPTER 4 EDUCATIONAL INTERVENTIONS: CHANGING ATTITUDES AND
PROVIDING INFORMATION 71**

Chapter Prologue

Introduction

Education to Change Environmental Attitudes and Beliefs

*Box 4-1: Attitudes versus Barriers to Action: Energy Conservation in
Massachusetts, 1980*

Efforts to Change Behavior with Information

Information, Plain and Simple

Better Ways to Provide Information

Tightening the Links from Attitudes to Behavior

When Does Information Work?
 Summary and Conclusion: What Can Education Accomplish?

CHAPTER 5 CHANGING THE INCENTIVES 95

Chapter Prologue
 The Theory of Incentives for Environmental Protection
 Box 5-1: *The Theory of Externalities*
 Incentives for Ride Sharing and Mass Transit Use
 Incentives for Recycling and Waste Reduction
 Reducing Energy Use in Homes
 Energy Price Changes
 Financial Rewards
 Making Conservation Convenient
 Principles for Designing Effective Incentives
 Conclusion: What Can Incentives Accomplish?
 Epilogue: How People Changed the Incentives Facing a Corporation

CHAPTER 6 COMMUNITY MANAGEMENT OF THE COMMONS 125

Chapter Prologue
 Introduction
 How Does Resource Management Work in Small Communities?
 Characteristics of the Resource
 Characteristics of the Group
 Characteristics of Effective Rules
 The Role of Central Government in Community Management
 The Psychology of Community Management
 Community Management and Hardin's Model
 Other Benefits of Community Management
 Applying Community Management Principles Beyond Small Groups
 Local Resource Dependence in Modern Societies
 Community Management without Resource Dependence
 Community Management as a Way of Life
 Community Management versus Development Policy
 Making Resources More Manageable
 When Is Community Management Likely to Work?
 Conclusion: What Can Community Management Accomplish?
 Advantages of Community Management
 Limitations of Community Management
 Promising Applications of Community Management

CHAPTER 7 COMBINING THE SOLUTION STRATEGIES 153

Chapter Prologue
 A Model Energy Conservation Program
 A Success Story on Recycling
 Lessons of Successful Environmental Programs
 A. Use Multiple Intervention Types to Address the Factors Limiting Behavior Change

	<i>B. Understand the Situation from the Actor's Perspective</i>
	<i>C. When Limiting Factors Are Psychological, Apply Understanding of Human Choice Processes</i>
	<i>D. Address Conditions Beyond the Individual that Constrain Proenvironmental Choice</i>
	<i>E. Set Realistic Expectations about Outcomes</i>
	<i>F. Continually Monitor Responses and Adjust Programs Accordingly</i>
	<i>G. Stay within the Bounds of the Actors' Tolerance for Intervention</i>
	<i>H. Use Participatory Methods of Decision Making</i>
	An Additional Value of Participatory Methods
	Conclusion

PART III

HUMAN BEHAVIORAL PREDISPOSITIONS AS AIDS OR BARRIERS TO SOLUTIONS 175

CHAPTER 8 STONE AGE GENETIC BEHAVIORAL PREDISPOSITIONS IN THE SPACE AGE 175

Chapter Prologue

Introduction

Human Genetic Predispositions and Environmental Problems

A Primer on Anthropology: Biological Evolution and Cultural Evolution

Box 8-1: Darwinian Natural Selection

Natural Stimuli and Human Well-Being: The Biophilia Hypothesis

Informal and Indirect Evidence for the Biophilia Hypothesis

Box 8-2: Phenotypes versus Genotypes

Limited Grounds and Criteria for Inferring the Existence of Genetic Behavioral Predispositions

Direct and Formal Evidence for Biophilia as a Human Genetic Predisposition

Brief Overview of the Biophilia Research

Genetically Based Sex and Reproductive Urges

Implications of Ehrlich's Argument

Global Population Growth—Other Causes and Solutions

Are Human Beings Short-Term Egoists by Nature?

The Argument That Natural Selection Favors Egoism

Arguments That Natural Selection Favors Altruism

Explaining Altruism as Egoism: Sociobiology and Reciprocity

A Cultural Evolutionary Account of Altruism

Stone Age Genetic Perceptual and Cognitive Predispositions

Hardin's Hypothesis: Genetically Based Denial

Ornstein and Ehrlich's Theory: The "Old" Human Mind in the New World

CHAPTER 9 HUMAN REACTIONS TO ENVIRONMENTAL HAZARDS: PERCEPTUAL AND COGNITIVE PROCESSES 205

Chapter Prologue

Example A: Underreaction to a Natural Hazard: UCLA Students and Earthquakes

Example B: Overreaction to a Natural Hazard: Lightning versus Tornadoes

Example C: Overreaction to the Risks of Nuclear Power and Other Technologies

Introduction—More on People's Reactions to Hazards and Risks

Underreactions to Natural, Technological, and Personal Health Hazards: A Closer Look

Overreactions to Natural, Technological, and Personal Health Hazards: A Closer Look

An Important Side Trip: A Major Problem When Judging Whether People Over- or Underreact to Risks of a Technology—The Moral, Ethical, and Political Issues that Underlie Societal Debates about Technological Risks

An Overview of Psychological Causes of Risk Misestimation and Failure to Take Appropriate Actions—Four Theories

Perceptual/Cognitive/Emotional/Evolutionary Causes of Risk

Underreaction—Three Theories

Slovic, Fischhoff, and Lichtenstein's (1978) Concept of Risk Underestimation/Inaction as Necessary for "Getting on with One's Life"

Taylor and Brown's (1988) Theory about "Illusions," Perceived Control, and Mental Health

Psychological Stress Theory: Denial as a Response to Environmental Threats Perceived as Uncontrollable

Cognitive/Perceptual Biases, Errors, and Shortcuts as Causes of Both Hazard

Overreaction and Underreaction—One Psychological Theory

Bounded Rationality

The Availability Heuristic

Availability and Risk Underreaction

Availability and Risk Overreaction

Other Heuristics, Cognitive Errors, and Biases

More on Availability: People's Insensitivity to Missing Items in Fault-Tree Analyses and Diagrams

Yet More on Availability: Some Speculation

Using Vivid and Concrete Images to Heighten People's Estimates of Risk and to Spur Protective Actions

Negative Research Evidence on the Use of Vivid, Concrete Images

Box 9-1: The "Scared Straight" Program: Could Whoopi Goldberg and Peter Falk Be Wrong?

<i>Conveying Both the Probability and the Severity of the Hazard</i>	
Chapter Summary: Putting the Different Elements Together: Psychological Causes and Possible Solutions	
<i>Overview of Modified Protection-Motivation Theory</i>	
<i>Values, Perceived Severity of Hazard, and Perceived Vulnerability (Probability) of Hazard</i>	
<i>Perceived Response-Efficacy, Self-Efficacy, and Perceived Costs and Barriers</i>	
<i>Beyond the Protection-Motivation Framework</i>	
Conclusion	

PART IV

BEHAVIORAL SOLUTIONS IN CONTEXT: ECOLOGICAL AND SOCIETAL SYSTEMS 253

CHAPTER 10 CHOOSING THE BEHAVIORS TO CHANGE AND THE POINTS OF INTERVENTION 253

Chapter Prologue	
Introduction	
A Behaviorally Oriented Analysis of the U.S. Energy System	
<i>Major Energy Users</i>	
<i>Major Uses of Energy by Individuals and Households</i>	
<i>The Conservation Potential of Thirty Different Energy-Conserving Actions</i>	
<i>More on "Curtailement" Conservation Actions versus "Increased Efficiency" Conservation Actions</i>	
Box 10-1: <i>Public Conceptions of Household Energy Conservation: Emphasis on Curtailments and a Neglect of Efficiency Increases</i>	
A Behaviorally Oriented Analysis of U.S. Litter and Solid Waste Problems	
The General Superiority of "Upstream" Rather than "Downstream" Solutions (or of Prevention Rather than Cure)	
Box 10-2: <i>More On "Upstream" versus "Downstream" Solutions, and Prevention versus Cure</i>	
Behaviorally Oriented Analyses of Global Environmental Problems:	
<i>The Greenhouse Effect and Climate Change as an Example</i>	
<i>The Analysis</i>	
<i>More on Fossil Fuel Consumption</i>	
<i>The Energy Crisis, Revisited</i>	
Choosing Target Behaviors: Earth Day 1990, and the as-many-as 750 Everyday Things You Can Do to Help Save the Earth.	

CHAPTER 11 HUMAN INTERACTIONS WITH COMPLEX SYSTEMS: "NORMAL" ACCIDENTS AND COUNTERINTUITIVE SYSTEM BEHAVIOR 277

Chapter Prologue	
<i>Nuclear Accident at Three Mile Island</i>	

Introduction

Complex Technological Systems and “Normal” Accidents

Characteristics of Normal Accidents

Box 11-1: *Marine Accidents and the Environment**Summary; Other Considerations**Does the Chernobyl Accident Fit the Normal Accident Framework?*

Complex Social, Economic, Political, and Environmental Systems

*Urban Systems and Global Environmental Systems**What Makes Complex Systems Difficult to Comprehend?: High-Order, Multiple Feedback Loops, and Nonlinearities*Box 11-2: *Feedback Loops**Augmenting the Human Mind: Computer Modeling of Complex Systems**Counterintuitive Properties of Complex Systems*Box 11-3: *Can Conservation Ever Be Bad? The Tucson**(Arizona) Paradox**A Caution Before Drawing Conclusions*

Conclusion

**CHAPTER 12 HUMAN INTERACTIONS WITH COMPLEX SYSTEMS:
CHAOS, SELF-ORGANIZATION, AND THE GLOBAL
ENVIRONMENTAL FUTURE 317**

Chapter Prologue

Beyond “Control”: Deterministic Chaos, Antichaos, and Self-Organization in
Complex Systems*Introduction; Deterministic Chaos and Noncontrol*Box 12-1: *Chaotic Behavior: The Beer Game**Processes That Counter Chaos*

A Broad Look at the Global Environmental Future

*Three Key Characteristics of the Global Environmental System That
Increase the Probability of Environmental Disasters**The Potential of the Global System for Overshoot and Collapse;
the Meadows et al. Computer Model**Criticisms of Meadows et al.'s Global Modeling Work;**General Conclusions That Appear to Be Sustained by This Work*Box 12-2: *The Julian Simon versus Paul Ehrlich Debate**Solutions to Global Environmental Problems*
